Irobot braava jet m6 (6110) ultimate robot mop- wi-fi

© 1996-2014, Amazon.com, Inc. or its affiliates HardwoodBaglessApp BasedSmart Home CompatibleSelf-mappingScheduled Cleaning iRobot® Braava jet® m Series Q. How is the Braava jet m6 different than the Braava jet 240? A. The Braava jet® m6 Robot Mop is intended for large, whole home mopping and sweeping, whereas the Braava jet® 240 is intended for smaller spaces, like the bathroom and kitchen. Like the Roomba i and s series robots, Braava jet m6 uses Imprint™ Smart Mapping to get to know the home's floor plan, giving users total control to choose which rooms are cleaned and when. And because Braava jet m6 is Wi-Fi connected, users can schedule the robot via the iRobot HOME app or initiate a cleaning mission with voice control when the robot is paired with Alexa™ enabled devices or the Google Assistant. Equipped with a Home Base, Braava jet m6 will automatically recharge, as needed, and continue cleaning until the job is complete. Like the Braava jet 240, the Braava jet m6 features wet mopping and dry sweeping modes. In wet mopping mode, users can add Braava jet Hard Floor Cleaning Solution to add a long-lasting fresh scent. In dry sweeping mode, the dry sweeping pad uses electrostatic force to capture dirt, dust and (pet) hair. The Braava jet m6 also supports Imprint Link™ Technology which enables these robots to intelligently communicate with the Roomba s or i series to deliver an extra level of clean by automatically vacuuming then mopping, just the way a human would. Q. What is Imprint™ Smart Mapping? A: Imprint™ Smart Mapping technology describes the robot’s ability to learn, map and adapt to your home. Braava jet® m6 learns your floorplan as it cleans and remembers this map for future cleaning jobs – this enables the robot to determine the best way to clean based on the orientation of each room, furniture placement, etc. Once the robot has learned your space and you have labeled your rooms, your Smart Map also enables you to direct Roomba to clean a specific room, multiple rooms, or an entire level of your home all from the iRobot HOME App. Q. How does Braava jet® m6 build its Smart Map and know your rooms? A. Braava jet® m6 builds a map of the area each time it starts a new cleaning job. After cleaning the same space a few times, the robot produces a Smart Map that you can customize in the iRobot HOME App. You can merge, split and label rooms as you see fit. After that, you can even set a schedule so that the Braava jet® m series cleans certain rooms on specific days at certain times, or an entire level of your home on the days you choose. Q. What is Imprint Link™ Technology and how does it work? A. Imprint Link™ Technology enables robots to intelligently communicate with each other – working in sequence to get the job done. With Imprint Link™ Technology, the Roomba i and s series work together with Braava jet m series to deliver an extra level of clean by automatically vacuuming then mopping, just the way a human would. You can initiate an automated sequential cleaning in the iRobot HOME App, where you have the option to choose specific rooms for the robots to clean or choose the whole home. The Roomba i or s series will first go out and vacuum the selected area. Once the Roomba successfully completes the job, Braava jet m6 will leave its dock and begin mopping. Q. How does m6 utilize Wet Mopping and Dry Sweeping pads? A. Attach a Braava jet cleaning pad and the Robot automatically selects the appropriate cleaning method for the pad. Wet Mopping pads feature wicking fibers to help break-up kitchen grease, grime*, and sticky messes. When Wet Mopping pads are attached, Precision Jet Spray loosens dirt and sticky messes without spraying furniture, rugs, or walls. Add Braava jet™ Hard Floor Cleaner for a long-lasting, fresh scent. Dry Sweeping pads use electrostatic force to capture dirt, dust, and pet hair. *Tested in Spot Clean mode Each product we feature has been independently selected and reviewed by our editorial team. If you make a purchase using the links included, we may earn commission. While there are some people who don't mind the manual labor that cleaning your home entails, many others would rather automate those tasks with smart appliances that do all the work for you. But nowadays, you aren't limited to cleaning your floors with robot vacuums that suck up dust and dry debris. Robot mops, which work wonders on hard surfaces like tile and wood, make it so you never have to pull out the spin mop or Swiffer again. That's why we were so happy to see that the iRobot Braava Jet m6—the overall best robot mop we've tested—is currently discounted by $101 on Amazon. We recently put eight different models through tests involving things like spilled soda and piles of pudding, and the Braava Jet m6 (which is from the same brand that makes Roomba vacuums) came out as the clear winner. To buy: $349 (was $450); amazon.com. Keep reading to learn more about why our favorite robot mop is worth buying, especially while it's still on sale. It works as a wet mop and dry sweeper. The Braava Jet m6 has both wet and dry functions, and it automatically cleans with the proper mode based on which cleaning pad you attach. The box comes with everything you need to get started, including a reusable microfiber pad, two single-use wet mopping pads, two single-use dry sweeping pads, and a bottle of cleaning solution. Even though the mop requires the brand's special solution, extra bottles are just $8 on Amazon. When we used the spot cleaning mode to mop up soda and syrup, our testers were impressed by how well it cleaned up the messes without spreading them around. It only took five minutes and a few passes to completely get rid of the stickiness. It didn't perform quite as well in our flour test, but dry spills like that are best left for vacuums, anyways. There's also a regular cleaning mode that will mop your entire home, not just a specific area where there's a spill. We also liked that the robot mop's square shape allowed it to clean hard-to-reach areas (like corners) without aggressively slamming into baseboards and furniture. It's loaded with smart features. Setting up the Braava Jet m6 was simple, especially with the help of the intuitive iRobot app. It's easy to download it on your smartphone and connect the mop to Wi-Fi, which gives you the ability to schedule regular cleanings, customize maps, and control the appliance while on the go. Once set up and running, the robot mop will start mapping out your home and cleaning in neat rows. It takes a few uses before the map is complete, but it'll eventually know which room it's in and whether or not to clean it. And if there are certain areas of your home that you don't want the robot mop to clean, you can set virtual boundaries so it avoids entering those areas. It can even detect carpets and rugs (along with stairs), so you don't have to remove them from the floors before each cleaning session. Plus, when the battery is running low (it lasted three hours for us), the Braava Jet m6 automatically goes back to its base to recharge. Once the battery is charged again, the robot mop picks up cleaning right where it left off. This is a can't-miss sale. Even though we'd still recommend the Braava Jet m6 at full price, it's always better to get it on sale—especially when you can save $101. The discount brings the smart robot mop down to $349, which is the lowest price it's been since earlier this summer. Head to Amazon to order one for yourself while it's still on sale. If you act fast, you might just be able to get it before Christmas. With Wi-Fi enabled, you can connect your devices to have seamless interface with the Internet. Once connected, your devices can exchange data and information.What Is Wi-Fi?Wi-Fi technology utilizes radio waves to connect computers and many other devices wirelessly to the Internet. Once connected to the Internet via Wi-Fi, you have the ability to remain connected without the limitations of cables. A wireless router receives and transmits signals between the Internet connection and the connected devices. Devices must have wireless adapters to connect wirelessly to Wi-Fi, and most current laptops and mobile devices have these adapters built in. Desktop computers may not have wireless adapters, in which case you can connect them either with an Ethernet cable or by adding a plug-in adapter.How Do I Connect to Wi-Fi Wirelessly?Your computer equipped with a wireless adapter will connect easily to Wi-Fi. Open the settings menu on a computer and then open network and Internet to set up a new connection. Follow the prompts, choosing your network and entering the password for the network. After entering the credentials, your computer should be connected.Connect a mobile device by opening the device settings and then opening the Wi-Fi connection. Once there, you should see your network as an option for connecting. Select it and enter your network password to finish connecting.Connect to Wi-Fi With a Plug-in AdapterYou can connect a computer with a plug-in adapter if it doesn’t have a wireless adapter. Insert the plug-in adapter into a USB port. Usually these adapters have CDs included with driver software, so insert the CD and follow the prompts. After completing the installation, you should be able to connect to your wireless network by choosing it and entering your network password.Connect to Internet With an Ethernet cableWith an Ethernet cable you can connect a computer even if it doesn’t have a wireless adapter. Find the Ethernet port on the computer, and insert the cable into the port. If your computer doesn’t have an Ethernet port, you could also use a special adapter that plugs into a USB port. Insert the other end of the Ethernet cable into the port on the far left of your wireless router. Look for a green light on the router.Can’t Connect to InternetIf you get an error message when trying to connect to a wireless network, try some troubleshooting to solve the problem.Make sure the wireless network adapter on your computer is enabled.Make sure your mobile device is set with Wi-Fi on and not set to airplane mode.Try turning off the Wi-Fi on the device and then turning it on again.Unplug your router, wait 30 seconds and then turn it back on.Delete the network as a saved network on your computer or device and start over by reentering the name of the network and the password.
